

1. További Bejelentkezési Opciók (Google mellett) és Nehézségi Szintjeik

A Verto fejlesztői és B2B fókusza miatt az alábbi szolgáltatókat érdemes fontolóra venni (Supabase / NextAuth alapokon):

Szolgáltató	Nehézség	Miért érdemes / Használati eset
Magic Link / Email OTP	**Nagyon könnyű** (5 perc)	Nincs jelszó és nincs külső API regisztráció sem. A Supabase out-of-the-box támogatja, az ügyfél egy kattintható e-mailt kap.
GitHub	**Könnyű** (10–15 perc)	Fejlesztői és SaaS projekteknél alapelvárás. A GitHub Developer Settingsben pár kattintás a Client ID és Secret generálása.
Discord / Slack	**Könnyű–Közepes** (15–20 perc)	Ha a fejlesztőcsapat és a kliens amúgy is Slacken vagy Discordon kommunikál, az ügyfél egy kattintással beléphet.
Microsoft (Azure AD)	**Közepes** (20–30 perc)	Kifejezetten vállalati/B2B ügyfeleknek ideális, ahol Microsoft 365-öt használnak. Az Azure App Registration felülete kicsit bürokratikusabb.
Apple ID	**Nehéz / Körülményes**	Fizetős Apple Developer fiókhoz ($99/év) kötött, emellett domain-verifikációt és manuális client secret generáló scriptet igényel.

Confirm your role

Choose how you will use Verto. If you make a mistake, don't worry—you can change this anytime in your account settings.

Developer

Manage projects, invite clients, estimate tasks, and oversee automated 5-DB change requests.

- ✓ Create and own projects
- ✓ Review database engine insights
- ✓ Connect JIRA & Git pipelines

Client

Submit change requests, track task progress, and communicate directly with development teams.

- ✓ Access shared projects
- ✓ Submit and view change requests
- ✓ Live chat and verify deliverables

⚠ You have selected **Developer & PM**. You will be redirected to the workspace creator.

	Title	Priority	Type	Deadline	Status
▾	#VR-104 Add OAuth login to checkout page	High	Feature	Nov 25, 2026	In Progress

Submitted — [Analyzing...] — Decision — Implementation — Done

Description
Add OAuth 2.0 login options (Google & GitHub) to our main checkout page so clients can pay faster. Ensure it links seamlessly to existing user accounts without breaking existing session flows.

John (PM) — 1h ago
Looks good, Levy! The vector matcher didn't find any dupes, but we need to check the DB constraints. Do you have 10 mins for a quick call tomorrow?

Levy (Client) — 45m ago
Sure John, I'm free tomorrow after 2 PM. I can schedule a meeting here if that works.

B) `Settings` (Mit állíthat itt a dev/PM?)

A fejlesztői felületen lévő *Settings* nem a profilbeállításokat jelenti, hanem a **Verto Engine szabályrendszerét:**

- **Triage Thresholds:** Vektoros hasonlósági küszöbérték állítása (pl. *75% felett automatikusan In Scope, alatta Scope Creep*).
- **Integrációk:** Jira API tokenek, GitHub Webhook URL-ek, Supabase / Redis csatlakozási kulcsok megadása.
- **SLA & Értesítések:** Hány óra után váltson egy kérés *Urgent* státuszba, ha senki nem reagált rá, illetve hol küldjön értesítést (Slack / Discord webhook).

C) `DB Monitor` (Szükséges-e?)

Mivel a 5 KPI kártya a lap tetején amúgy is élőben mutatja a Qdrant, Neo4j, Postgres, Mongo és Redis állapotát, a külön `DB Monitor` gomb valóban **redundáns felületi elem**.

- **Megoldás:** Érdemes kivenni, és a helyére mindössze egy kisméretű, diszkrét állapotjelzőt tenni (pl. egy zöld pöttyöt `Engine Active` felirattal), ami jelzi, hogy az adatbázis-szinkronizáció éles és fut.
